Full Stack Software Engineer specialized in building robust, AI-powered solutions, web, and mobile apps, with a focus on innovation, scalability, and future-forward vision.

Experience

Fullstack Software Engineer | Decode Data, Brasil (Remote)

Sep 2025 – Present

- Contributing to the platform's AI agent layer with Agno (Python), powering chat and an interactive canvas experience, including session management, RAG over pgvector, and guardrails for PII and prompt-injection protection.
- Built a data anonymization solution to protect sensitive information while keeping datasets usable for analysis, using Next.js, Python, Airbyte, and PostgreSQL.
- Building an agriculture-focused system that imports .kmz files to automatically extract farm data and visualize property boundaries on an interactive map.

Fullstack Software Engineer | Rendair, United States (Remote)

Oct 2025 – Jun 2026

- Built a custom thumbnail generation pipeline, cutting preview/thumbnail rendering cost by around 60%.
- Redesigned the Previous Generations tab with new filters, multiple grid view sizes, and multi-select bulk actions, extending the same experience to the Assets section.
- Delivered fullstack features and production fixes across React and Node.js on AWS (Lambda, SQS, S3) for a platform used by architects worldwide to generate and edit AI-powered renders.

Freelance iOS Developer | Epicure, France (Remote)

Jan 2025 – Nov 2025

- Developed and launched AI-powered mobile apps (Havana, HerAI) end-to-end, from backend development to Swift/React Native front-end implementation and App Store publishing.
- Built and integrated custom AI APIs powering personal-assistant, travel-planning, and life-coaching features, delivering highly personalized experiences.
- Designed scalable backends and real-time communication flows with secure third-party integrations, ensuring smooth performance and fast response times.

Software Developer | Onedev Sistemas, Brasil

Mar 2022 – Nov 2024

- Built a complete messaging platform (Next.js, NestJS, PostgreSQL) with WhatsApp bot automation, significantly improving response time and service organization.
- Optimized the database by adding indexes to core system queries, reducing execution time by 80%.
- Developed a real-time file upload and sharing feature integrated with the WhatsApp API, using Node.js streams and Cloudflare.

Tech Stack

Next.js, React, Node.js, NestJS, TypeScript, Swift, SwiftUI, Python, PostgreSQL, AWS, Docker, Git

Education

UNIPAR – Universidade Paranaense

Associate's Degree (Tecnólogo) in Systems Analysis and Development | Feb 2021 – Aug 2023

Languages

Portuguese | Native

English | Intermediate
